Profile

I got into software development from geeking out on the internet in my school days making custom blog web applications in Wordpress and trying out coding in php and since then I continued learning more and more. Recently I have been working with large-scale e-commerce platforms based on Java and Spring as a Backend developer working on cloud migration, pipeline modernisation and continuous development. I am still nerding out on the internet trying new things such as using golang and Rust in side projects, contributing to opensource projects and doing more with LLM-based workflows.

Education

Stockholm University B.S. in Computer & Systems science	Stockholm, SE 09/2017 - 06/2020
---	------------------------------------

Employments

Vass Consulting Sweden Software developer Consultant	2020 - Present
Stockholm University Workshop Manager & Tutor	2018 - 2020
Adela Omsorg Office Administration (part-time)	2017 - 2020

Job experiences

Axfood IT - E-Com B2B Web Team Role: Backend Developer	06/2025 - Present
--	-------------------

- Backend developer in Snabbgross mainly focused on the Cloud migration and modernization project.
- Executed migration from Sonic MQ to AWS SQS with event-driven architecture principles. Implemented mTLS-secured communication for internal integrations. Moved from Jenkins to Bitbucket Pipelines with functional CI/CD towards SAP CCV2.
- Designed and implemented performance testing strategy using Grafana k6. Established baseline performance metrics for Cloud migration project.
- Reduced technical debts by aligning Spring dependencies and API definitions with updated standards.
- Configured new pipelines in CI/CD processes for more robust and reliable environment such as dependencies check with OWASP Dependency Check, continuous updates by RenovateBot and code quality checks by Sonarqube CE.
- Configured an agentic workspace for developer collaboration in the development environment in form of context refinement and defining skills files and reusable markdown resources.
- Contributed to team activities such as scrum ceremonies, new feature development, feature maintenance and code review loops.
- Tech: Java, Spring, SAP CCV2, Dynatrace, AWS S3 SQS, Grafana k6, REST API, Bitbucket Pipelines.

Axfood IT - E-Com B2C App Team Role: Backend Developer	04/2023 - 05/2025
--	-------------------

- Led backend development for a complete redesign of the Willys app, migrating to React Native. Implemented BankID login using OAuth2 for secure authentication
- Scan&Go Feature: Maintaining in-app barcode scanning feature and integrated Swish as a payment method. Handling production issues with internal or external integrations.
- Contributed to new feature development, backend maintenance, and support for Hemköp's mobile app.
- Tech: Java, Spring, SAP Hybris, OAuth2, AWS, React Native, REST API, BankId, Swish, SwedBank Pay, Klarna, Extenda integrations.

Axfood IT - E-Com B2C Web Dev

03/2022 - 03/2023

Role: Backend Developer

- Developed integration between SAP Hybris and Cloudinary to centralize image storage. Optimized legacy media and improved database performance and cost efficiency within S3 media
- Ongoing development and maintenance for Willys and Hemköp's web and mobile e-commerce systems. Focus on new features, performance, and integration.
- Tech: Java, SAP Hybris, Apache Ant, Spring, REST API, AWS, Groovy, Jenkins, Bitbucket Pipelines, Atlassian, Git

Axfood IT - E-Com API Test Automation

10/2021 - 03/2022

Role: Junior Backend Developer

- Created comprehensive integration and system tests for REST APIs to improve platform stability
- Tech: Java, Spring, JUnit, Mockito, SAP Hybris, Bitbucket, Git

Gastrofy (Northfork) - Front-end development

03/2021 - 05/2021

Role: Junior Frontend Developer

- Built reusable frontend services and widgets for an online recipe platform.
- Tech: React, TypeScript, SASS, Figma

Selected Side Project

yTunes - TUI Music Player [Link to github](#)

- A TUI audio player built in Go and Bubble Tea. It plays audio from a YouTube URL and other sources in the terminal
- It all started when I was tired to have music playing tabs in chrome eating my RAM while doing works in terminal or some IDE. So I started building the solution as a useful tool on my own wrapped around a pretty terminal user interface
- It plays through mpv with a retro-styled responsive terminal user interface. It also comes with a handful of built-in themes such as dracula, gruvbox, Catppuccin.
- Playback runs through mpv's JSON IPC socket (--input-ipc-server) so ytunes can poll real playback position and pause/resume cleanly.

Skills & Merits

Certificates: AWS Certified Solutions Architect Associate

Programming Languages: Java 17+, JavaScript, SQL, Groovy, Kotlin, Python, HTML/CSS, .Net, Golang

Tools and Frameworks: Spring 5/6, JUnit 4/5, Git, REST, SOAP, Postman, React, TypeScript, Swagger, SAP Commerce, AWS Console, Docker, Scrum, Kanban, Agentic Workflows.

Knowledge in LLM-based coding assistants: Claude Code, Pi, Cursor, Codex, Ollama, Amazon Kiro.

Languages: Swedish (fluent), English (fluent)
